Cikarang, Indonesia

An Informatics undergraduate student at President University, specializing in Cybersecurity. Combines a strong foundation in UI/UX design and software development with sharp security intuition. Experienced in building robust databases, configuring network infrastructure, and mitigating system vulnerabilities through competitive Capture the Flag (CTF) achievements. Proficient in leveraging Python, PHP, and JavaScript to build, analyze, and secure web applications.

Education Level

PRESIDENT UNIVERSITY - Cikarang, Indonesia

Sep 2024 – Oct 2027 (Expected)

Informatics, Candidate for (S.Kom), 3.65/4.00

- Award: Jababeka Scholarship 75%
- Relevan Coursework: Cyber Security Fundamentals, Ethical Hacking, Network Security, Security Risk Management and Audit, Database System, Data Structure and Algorithm.

SMA LTI IGM PALEMBANG - Palembang, Indonesia

Jul 2021 – May 2024

Natural Sciences, 89.97/100

- Achievements: Awarded the Best Student in the subject of Computer Science/Informatics for 3 consecutive years.
- Awards: Silver Medalist in National ICT (Informatics) Olympiad.
Silver Medalist in National Mathematics Olympiad.
Silver Medalist in National Physics Olympiad
Silver Medalist in National English Olympiad.

Projects

SMART ATTENDANCE SYSTEM (Face Recognition-Based Attendance)

- Developed a facial recognition-based attendance system using Python and OpenCV for automated user identification and attendance tracking.
- Implemented Haar Cascade for real-time face detection and LBPH Face Recognizer for user recognition and model training.
- Automated attendance recording and report generation by storing user data and timestamps in CSV/Excel-based databases.
- Designed a user-friendly Tkinter GUI and improved attendance accuracy while reducing attendance fraud through biometric verification.

CONFIGURATION & NETWORK SECURITY (Linux, Ubuntu & Cisco)

- Designed and implemented a secure network infrastructure using network segmentation, firewall rules, and access control policies to protect critical organizational assets.
- Conducted network discovery, port scanning, and service enumeration to identify active hosts, services, and potential security exposure within the network.
- Configured and managed iptables, UFW, SSH, HTTP, and FTP services to control network traffic and enforce secure access policies.
- Developed a secure network architecture for a hospital information system case study, including server separation, database protection, subnet planning, and firewall segmentation.

AI-ASSISTED CYBERSECURITY RISK ASSESMENT & SECURITY AUDIT PLATFORM (Website)

- Developed an AI-assisted cybersecurity risk assessment and security audit platform based on the NIST Cybersecurity Framework (CSF) and OWASP Top 10 standards.
- Implemented automated risk assessment, compliance scoring, and audit finding generation to support structured cybersecurity audits for web-based information systems.
- Integrated Ollama AI (LLaMA 3) to provide management-friendly explanations of cybersecurity vulnerabilities and their business impacts.
- Designed features for asset inventory management, evidence collection, and PDF-based audit/risk report generation using role-based access control (RBAC).

CYBERSECURITY CHALLENGES - CAPTURE THE FLAG (CTF)

- Solved web security challenges involving Server-Side Request Forgery (SSRF), Local File Inclusion (LFI), Arbitrary File Upload, and Remote Code Execution (RCE) vulnerabilities.
- Conducted web application security assessments to identify and validate security weaknesses in server-side components and file handling mechanisms.
- Performed internal service enumeration, sensitive information discovery, and vulnerability exploitation in controlled Capture The Flag (CTF) environments.
- Produced technical writeups documenting vulnerability analysis, exploitation methodologies, security impacts, and mitigation recommendations.

Competition Experience

PU CTF: DIGITAL FORENSIC | TUKANG BENGKEL SERVEL - RANK 6TH OUT OF 30 TEAMS

- Conducted vulnerability assessments, web application penetration testing, and attack path analysis to capture flags in a competitive environment.
- Successfully exploited and mitigated critical web vulnerabilities, including Server-Side Request Forgery (SSRF), Local File Inclusion (LFI), Cross-Site Scripting (XSS), XML External Entity (XXE), IDOR, and File Upload bypasses.
- Performed internal network reconnaissance and bypassed secure file upload restrictions to gain unauthorized access to target servers.

PU CTF: ETHICAL HACKING | HIGH CORTISOL – RANK 16TH OUT OF 38 TEAMS

- Investigated digital evidence and analyzed attack artifacts related to phishing incidents, malware indicators, deleted files, and Windows event logs.
- Utilized industry-standard forensic tools including Wireshark, FTK Imager, MFTECmd, NetworkMiner, Binwalk, and ExifTool within a Kali Linux environment.
- Conducted deep-dive analysis on network traffic, Windows/NTFS artifacts, steganographic content, and cryptographic data to reconstruct security incidents.

Certifications

PU

- -.

Skills & Langaue

- Programming Languages: PHP, JavaScript, Python, C++, Java, Lua (Roblox), HTML, CSS.
- Frameworks & Libraries: Laravel, OpenCV, Tkinter.
- Databases: MySQL / Relational Databases.
- Tools, Platforms & OS: Linux (Ubuntu), Git/GitHub, Microsoft Office (Word, Excel, PowerPoint).
- Cybersecurity Skills & Tools: Kali Linux, NIST CSF, OWASP Top 10, Network Security (Firewalls, Network Segmentation, Port Scanning), CTF Methodologies.
- Languages: Indonesian (Native), English (Upper-Intermediate).
